ABSTRACTED-PUB-NO: DE 19512574A

BASIC-ABSTRACT:

Radioactive material intended for storage is transported and/or stored in a
container (1), which has at least one inner container (2), in the form of a
drum, to accommodate the material being stored, on the outside of which is an

electric heater (6), covered by a layer of insulation (7) which also surrounds the base (4) and shell (3) of the inner container. An outer container (8) with removable lid (9) surrounds the inner container and is designed for mechanical protection of the stored material and radiation shield. A filling pipe (10) and suction pipe (11) pass through openings in the outer and inner containers and connect with the interior of the inner container. Pref. the inner container is of metal and/or plastic and the outer container is of metal, e.g. cast iron and/or concrete.

ADVANTAGE - Allows thermal treatment to be carried out on charge, e.g. for drying.

CHOSEN-DRAWING: Dwg.1/1

TITLE-TERMS: TRANSPORT STORAGE CONTAINER RADIOACTIVE MATERIAL HEAT INSULATE
INNER CONTAINER OUTER CONTAINER ALLOW THERMAL TREAT CHARGE
